

Automated Insurance Solutions (AIS) Use Case: Employers Liability / Public Liability

Example Construction struggled with a time-consuming employer or public liability claims processes.

Site managers had to manually collect statements, evidence, HR data, and safety reports from multiple sources. The constant back-and-forth led to frustrating delays.

By implementing AIS, they accelerated their claims process:

- Site managers guide employees to report their claims using QR codes
- Digitally collect witness statements, images, and videos
- Seamlessly access HR and safety data – all within a single platform

With AIS, site managers can also generate follow up maintenance tasks automatically, ensuring prompt repairs to equipment or facilities involved in incidents.

All of this was done using AIS's simple, no-code, drag and drop workflow builder that enables building bespoke, dynamic interactions with employees to gather all the information needed to process a claim.

Find out how AIS can streamline your employer or public liability claims process through intelligent automation.
